

Astrocade Game Creation Cheat Sheet

Whether you're just starting out or trying to fine-tune your next viral hit, here's a quick guide to help you get the most out of Astrocade:

1. Start with a clear vision.

Use Astrocade's prompt box or even ChatGPT to brainstorm your game idea. Figure out the **core mechanics**, the **theme**, and the kind of experience you want players to have. The clearer your vision, the better your results.

2. Generate in parallel.

Once you've got your idea, write one solid prompt. Then—pro tip—**open 5 tabs** of Astrocade, paste the same prompt in each, and hit "Create." This helps you explore different variations of the same concept quickly.

3. Playtest all 5 versions.

After about 5 minutes, try out each version. It's surprisingly fun—and usually, at least one will feel **closest to your vision**. If not, you'll still have a solid starting point to begin refining.

4. Use smart prompts.

Here are some magic phrases:

- *"Make the UI and game feel like a 2D AAA game."*
- *"Please do a round on the game feel and camera—make it perfect based on proper game design principles."*

These help polish your game without rewriting everything.

5. Use 'Undo' liberally.

If a wish takes your game in the wrong direction, don't stress—just undo and try again.

6. Embrace trial and error.

Running multiple versions with the same wish is part of the process. Think of it as testing different realities of your game. It's actually pretty fun—and effective.

7. Keep edits quick.

Each wish/edit should take **2–3 minutes tops**. Expect to make **10–20 small wishes** to shape your game into something playable and exciting.

8. Be patient with the wait time.

Yeah, 11 minutes is long. But quality takes time. Use that time to brainstorm your next few wishes or try another game idea in parallel.

9. Polish last.

Once the gameplay feels solid, send a wish like:

"Do a pass on UI so my game looks and feels like a 2D AAA game."

This usually gives your game a strong finishing touch.
